■ QUALITY AS A MATTER
OF CONVICTION

From our own experience in the world's crisis regions we appreciate the importance of being able to rely on one's equipment.

During his active service with a special unit of the Bundeswehr, company founder Josef Sixt decided to improve his equipment for his personal requirements – with considerable success. Today, Lindnerhof is one of the most sought-after suppliers of law enforcement and military units.

For us quality is not only a sales argument; it is part of our philosophy, according to which we constantly scrutinize and optimize every single product.

MADE LOCALLY
FOR A GLOBAL MISSION

The medium-sized company with headquarters in Lenggries manufactures on its own premises and in certified EU production facilities. Strict quality controls and precisely defined workflows ensure that Lindnerhof products are among the most robust items of equipment available anywhere on the global market.

■ PLATE CARRIERS AND PERSONAL ARMOR

The outstanding attributes of our plate and armor carriers are maximum protection and functional design. Innovations such as the quick-release system make vest handling easier and safer. In addition, modular expandability enables the user to configure his gear individually.

■ CHEST RIGS AND BELTS

In the field of tactical carrying equipment we produce modular chest rigs and belts for a wide range of applications. The chest rigs of the Light series can be coupled with plate and armor carriers to form a combined unit and, depending on the mission, effectively supplemented.

■ AMMUNITION AND ACCESSORY POUCHES

Besides ammunition pouches, the product range includes medic pouches, grenade pouches, GPS pouches and dump pouches. Always designed for reliable handling under real conditions, the pouches can be quickly attached by modular design to chest rigs, plate carriers and armor carriers.

A HEAD START IN DEVELOPMENT

We strive to fulfil the needs of our customers even better. Research and development take place on our own premises and in cooperation with experts.

In addition to patents such as the quick-release-system, new research results are regularly achieved, such as the Hybrid Laminate. The innovative material enables the manufacture of ultra-light and hardwearing products

PERFECTION IN EVERY DETAIL

At Lindnerhof you buy more than an item of tactical equipment. Each product has its own, individual story. Our prototypes are hand-made, always designed to provide the best possible support to officers on duty.

Utmost precision is the overriding principle upon which all workflows at Lindnerhof are based. A highly qualified team of employees offers the necessary backing to ensure that all manufacturing processes are efficiently and carefully managed. Needlework for the CAD-based designs and developments is performed by subcontractors in the EU that have been certified to ISO 9001.

MILITARY

The operational experience of the Lindnerhof founders forms the basis for tactical equipment that incorporates an impressive range of innovative functions. Practice-oriented developments, such as the releasable plate carrier or Multi Caliber Pouch, are the product of many years of experience in the tactical field.

■ POLICE

Our products satisfy all demands for daily use by police and security guards. From the armor carrier to rigger belts and radio pouches, we offer a broad product range that is optimally geared to the needs of armed forces and gives the wearer full control of his gear.

INDUSTRY

In cooperation with our customers, we develop specific solutions in the textile segment that go beyond police and military operations. Many companies in the defense industry draw on our experience.

■ SECURITY YOU CAN
DEPEND ON

The advanced product design and extreme durability of the materials used give our customers the peace of mind that they can always depend on their equipment. Thanks to the closed development and production chain, the individual lines of gear can be flexibly coordinated.
